

your questions answered

? Are all superabsorbers the same? **no**

Eclipse® is the only superabsorbent range to benefit from CrystaLock™ technology, specifically chosen for its dynamic fluid handling capability, which maintains a moist healing environment. In a recent evaluation¹, only Eclipse was clinically proven to meet key performance characteristics of superabsorbent dressings including absorbency, fluid handling, strikethrough and structural integrity².

? Are all superabsorbers tested to the same international quality standards? **no**

The Eclipse® range has been independently tested to ISO 13726. Unfortunately some manufacturers test internally and adapt the recognised ISO standard to improve their results.¹

? Can Eclipse be used under compression? **yes**

Eclipse® is clinically proven to be used safely under compression³.

? Is it true that layering superabsorbent dressings is good clinical practice? **no**

Eclipse® has a non-strikethrough backing so layering isn't required. Layering can increase maceration, infection, discomfort, leakage and pain, which can significantly impact patient Quality of Life.⁴

? Is Eclipse more expensive than KerraMax Care™? **no**

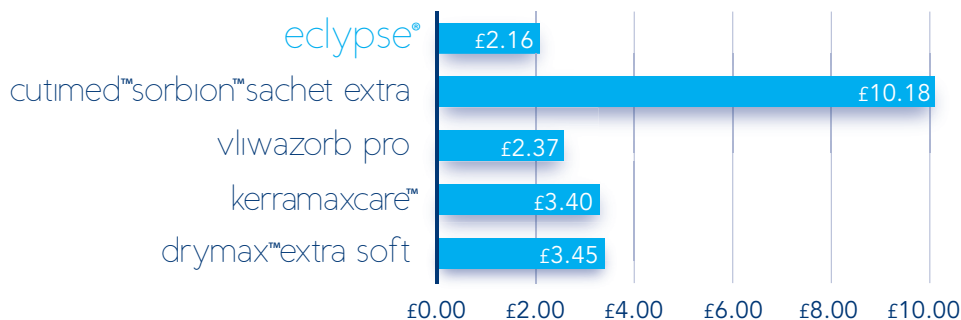

You could save up to 43% by using Eclipse® rather than KerraMaxCare. In fact, significant cost savings can be made against most of the leading like-for-like alternatives⁴ (see reverse).⁵

Eclipse® Superabsorbent Dressings

Eclipse® Superabsorbent dressings, with unique CrystaLock™ technology, have the capacity to handle high levels of wound exudate, locking it away within the core of the dressing to reduce leaks and the risk of maceration.

how eclipse compares on price

Based on 20cm x 30cm dressing. Prices are correct as of UK Drug Tariff October 2018
